Make Russian Special Chars Visible and Easy Accessible to Text Entry in your Windows-Apps For those who do not take English as their primary language, its not always easy to remember all the characters that appear in English text. Just like the Canadian, Russian, Japanese, German, Swedish, Norwegian and many other languages you most likely use written text, the English language has very many words and phrases that have accented characters and special symbols in place of the letter letters themselves. These accented characters can be found for instance in Russian, Chinese, German, Swedish, Japanese, Norwegian, many other languages, and are important for properly transcribing text. The Extra Keys utility makes the work for computer users, translating these special characters to keys on a mouse or touchpad for easy input into applications. The application can also be used to access accented characters without a mouse or touchpad. Keyboard layout change The user interface of the software is intuitive and easy to handle. It is possible to change the keyboard layout of the program in a few simple clicks. As the application detects the language you use for the operating system, it can automatically detect the language of the software to display the accented characters. To get into keyboard settings, you need to select the change layout option from the menu bar on the left. This will make the upper case characters of the language appear on the right of the keyboard, and the lower case characters on the left. Accented Characters on the mouse and touchpad Extra Keys allows users to assign a shortcut key to a cursor on the mouse or on the touchpad, making it very easy to enter an accented character. This feature is adjustable in the settings, and the assigned key can be changed. Keyboard shortcuts can be easily added in the application settings. For instance, the program lets you assign a keyboard shortcut key to display a drop-down menu in the function panel. It can also be assigned to a special menu, to perform an action or to open a file. The Dragon NaturallySpeaking 11 software packages integrate speech recognition, voice synthesis, and text-to-speech synthesis into an easy-to-use package for Windows-based PC users. The product can work with both desktop and portable versions of the product and comes with an acoustic model based on the user's computer system. Simply plug in a headset and the portable version will work; however, the desktop version has an additional port that will allow you to connect a microphone

Keyboard help! After you download and install it, you will be able to use the special characters through the onscreen keyboard. Supported languages include English, Arabic, Chinese, French, German, Italian, Japanese, Korean, Russian, Spanish, and Turkish. LeetSpeak is a comprehensive application that offers you an easy-to-use virtual keyboard for typing special characters and other symbols on your system. The software is capable of executing a wide range of functions, including shortcut typing, speech recognition, automatic translation, and easy-to-use, customized layouts. The keyboard allows you to make the output text speak any language you want. There are three methods to select the output language: Expert mode, Easy mode, and Automatic mode. If you are switching between the built-in apps, the applications will be displayed in the new order. It is easy to switch between them using the up and down buttons. In the keyboard menu, you can pick the language of the text you want to produce, set it as the primary or second language, and adjust the number of characters. You can also switch the program's language to other languages and change the keyboard layout. The included software helps you change, restore, and detect text types. You can save the text file to any folder, and you can create a language history to quicken the process. The autoreplace option automates the process of replacing one letter with another. The software provides lots of typing options including the popular shortcuts, voice typing, and customizable languages. You also get to control background noise, volume, and other options to make sure your communications are as clear as possible. KeyScripts is a program that acts as an onscreen, or virtual, keyboard. The software offers numerous possibilities, such as the ability to activate certain

keyboard shortcuts, use the keyboard to view webpages, type out email addresses, and so on. The software supports over 50 languages and can display or hide the virtual keyboard with a click of a button. The application can be operated within a program, such as Word, a browser, or a document. You can choose to show the extra characters in the primary panel or in the status bar. The tool can save typing history, and it includes a spell checker and the option to toggle between different languages. It will save you the tedious process of looking up the characters on the Internet every time. The tool has options to quickly copy and paste text, copy text to the
